Buddha Import

An introduction to the Asian engineers importation

December 2011

What are we doing Our company have been specialised in the importation of Asians software engineers for more than ten years. Our imported engineers are able to complete complex tasks, like building amazing Java management applications from scratch, with less than the fourth of the price of an European engineer (we don't know why they are called "engineer" because you don't need to be an engineer to develop Java applications).

Personal details We are 3 employees from our Ukrainian offices, near Prypiat. All of us are working on the seeking of new clients.

Personnel In ten years, our company have grown to around one hundred workers. We have plans to provide temporary workers to increase our benefits.

Products and services We offer a large range of competences, from Java computer scientist to Oracle administrator. Note that those people need to be restricted in a Zone.

We are in contact with top Indian and Chinese universities. Our new temporary workers service will be able to give working force to our customers without the price of a full time employment.

Market Buddha Import is the largest European company specialised in engineers importation and our prices are the lowest of this market.

Marketing We have a lot of consultants to help our clients to find exactly what they need. We are able to give precise estimations of costs reduction to our customers, which is a huge advantage in customers relations.

Premises and logistics   Buddha Import is located in Ukraine. We have our own planes for the importation and we plan to buy two new Airbus A380, so we will be able to import four hundreds engineers per day.
